EMERGENCY BUDGET 2010 AT A GLANCE
WERE YOU A WINNER OR A LOSER?

OPEN FOR BUSINESS
BUSINESS TAXES GIVEN SOME RESPITE

CAPITAL GAINS TAX
‘ONE OF THE MOST CHAOTIC AREAS OF TAX’

IN SEARCH OF INCOME
ALTERNATIVE HOMES FOR YOUR NEST EGGS

LIFESTYLE PROTECTION
HAS YOUR NEED FOR PROTECTION CHANGED?

FINANCIAL FOUNDATIONS
WE TAKE THE TIME TO FIND OUT ABOUT YOU
Financial planning is our business.

We’re passionate about making sure your finances are in good shape.

Our range of personal financial planning services is extensive, covering areas from pensions to inheritance matters and tax-efficient investments.

Contact us to discuss your current situation, and we’ll provide you with a complete financial wealth check.

IN THIS ISSUE

Capital gains tax
“One of the most chaotic areas of tax”

05

A “tough but fair” Budget
Rebalancing the British economy

06

Pension planning in your 40’s, 50’s and 60’s
Staying on track for a comfortable retirement

08

Business protection
Protecting key employees

10

Investment trusts
One of the easiest and most cost-effective ways to invest in the stock market

11

Protecting your wealth
Valuing an estate for inheritance tax

12

Planning your investment strategy
What are you trying to achieve with your investments?

14

Spreading your investments
Risk is an implicit aspect to investing

16

Income protection insurance
Sustaining a regular income
What the numbers mean to you

18

Existing annuity rules to end
Making more flexible use of pension savings

20

Protecting pensioners
Link with average earnings reinstated

20

Lifestyle protection
Has your need for protection changed?

21

Green investors
A principled approach

22

Obtaining the highest market rate
Don’t leave it too late to shop around for the best annuity deal

22

Families banking more money
Savings ratio rises for the first time in more than 20 years

23

In search of income
Alternative homes for your nest eggs

24

“Open for business”
Business taxes given some respite

25

Emergency Budget - taxation and allowances
What do the numbers mean to you?

26

Emergency Budget 2010 at a glance
Were you a winner or a loser?

30
Welcome to the new edition of our personal financial planning and wealth management magazine.

The Chancellor of the Exchequer, George Osborne MP, delivered on 22 June what he described as a ‘tough but fair’ emergency Budget. In his speech, the Chancellor set out his five-year plan to reduce the Budget deficit, rebalance the British economy and design a new model for economic growth. Find out how you fared on this page and on pages 5, 6, 23 and 30.

Saving for your retirement is one of the most important financial plans you can make. If you’re currently in your 40s, 50s or 60s, you may be looking forward to a time when you have the freedom to do what you want, when you want. On page 8 we look at how you can make sure you stay on track to achieve a comfortable retirement.

THE CONTENT OF THE ARTICLES FEATURED IN THIS PUBLICATION IS FOR YOUR GENERAL INFORMATION AND USE ONLY AND IS NOT INTENDED TO ADDRESS YOUR PARTICULAR REQUIREMENTS. ACURATE IN THE FUTURE. NO INDIVIDUAL OR COMPANY SHOULD ACT UPON SUCH INFORMATION WITHOUT RECEIVING AppROPRIATE PROFESSIONAL ADVICE.

Thresholds, percentage rates and tax legislation may change in subsequent finance acts.

WELCOME TO THE NEW EDITION OF OUR PERSONAL FINANCIAL PLANNING AND WEALTH MANAGEMENT MAGAZINE.

The Chancellor said that by raising the rate at 18 per cent for low- and middle-income earners, he was excluding half the payers of CGT from the tax increase. The annual exempt amount for CGT remains at £10,100 this year and will continue to rise with inflation in future years. He also said that the complexity and administration involved with this would have been ‘self-defeating’.

Did you know?
Each taxpayer can realise an amount of capital gains each tax year free of CGT. This annual exemption is currently £10,100 (2010/11) of capital gains and therefore, when planning to sell a capital asset, consideration should be given to splitting ownership between husband and wife, or between civil partners, to benefit from two annual exemptions. The transfer of assets between spouses or civil partners is on a ‘no gain no loss’ basis, so this can provide an immediate saving of CGT. Similarly, you could consider spreading disposals over a number of years.

The rate of CGT will be held at 18 per cent if your combined taxable gains and income are below the upper limit of the basic rate of income tax, currently £37,400.

A ‘TOUGH BUT FAIR’ BUDGET

REBALANCING THE BRITISH ECONOMY

The Chancellor of the Exchequer, George Osborne MP, delivered on 22 June what he described as a ‘tough but fair’ emergency Budget. In his speech, the Chancellor set out his five-year plan to reduce the Budget deficit, rebalance the British economy and design a new model for economic growth.

There will be a two-year pay freeze for public sector workers earning more than £21,000, although the 1.7 million lowest paid will get a flat £250 pay rise each year. Limits will be put on the salaries of the highest paid public sector workers.

Around 880,000 workers will no longer pay income tax after the Chancellor raised the personal allowance by £1,000 to £7,475 from £6,475. Basic-rate taxpayers will be £170 a year better off as a result. Those earning more than £40,000 will not benefit because they will be subject to the rise in National Insurance contributions, a Labour policy that Mr Osborne has decided to retain.

For investors, basic-rate taxpayers will continue to pay capital gains tax (CGT) at 18 per cent and the annual exemption of £10,100 remains. Higher-rate taxpayers will now pay 28 per cent.

Child tax credits will be withdrawn for families earning more than £40,000 a year, rather than £50,000, while child benefit will be frozen for the next three years.

For business, there were reductions in corporate tax rates and proposals to consult on corporation tax reform. However, the banking sector will have to bear the cost of a new bank levy.

Around 880,000 workers will no longer pay income tax after the Chancellor raised the personal allowance by £1,000 to £7,475 from £6,475. Basic-rate taxpayers will be £170 a year better off as a result.
STAYING ON TRACK FOR A COMFORTABLE RETIREMENT

Saving for your retirement is one of the most important financial plans you can make. You can choose to save in a pension scheme and/or a savings plan, but whatever you decide, you’ll want your funds to grow and be worth as much as possible in the long-term.

If you’re currently in your 40s, 50s or 60s, you may be looking forward to a time when you have the freedom to do what you want, when you want. Staying on track to achieve a comfortable retirement requires careful planning, which is why we provide professional advice to enable our clients fully to understand the different options available that can help boost their savings during retirement.

When advising our clients, we also take into account investing in non-pension savings that could be used to supplement pension savings and provide the facility to access money in the event of an emergency. We consider the importance of making sure our clients have the right mix of investments, which is crucial to ensure their savings outpace the return of any threat of future rising inflation. In addition, some of our clients as they approach retirement may also want to take up to 25 per cent of their pension fund as a tax-free lump sum, which they could use to supplement their retirement income by investing in a flexible investment.

Complete retirement from work or changing work patterns, such as becoming a part-time or temporary worker, will also mean changes in lifestyles. We can help you implement a bespoke retirement planning strategy to ensure that you can look forward to a comfortable retirement. So what do you need to consider?

40 somethings
If you haven’t started saving for your retirement by the time you reach your 40s, you need to do something about it! You may already be saving or investing via a tax-efficient Individual Savings Account (ISA), which could be used to supplement part of your income during your retirement years.

If you haven’t started saving for your retirement by the time you reach your 40s, you need to do something about it!

During this stage of your life your earnings may be rising, so it’s crucial to allocate the right percentage of your income towards your future pension provision. Ideally, by the time you reach your 40s you will already have built up some retirement savings, whether in the form of ISAs or an occupational personal scheme. But if you haven’t started, it’s not too late – it will just require more effort. This is a very crucial time for your retirement planning and it’s imperative that you act now. Your earnings are likely to be approaching their highest level during this period of your working life and it’s important to make the most of any pay rises and bonuses to help increase your retirement savings.

50 somethings
This decade is perhaps the most important all when it comes to retirement planning. As you enter your 50s you should be maximising your contributions, and as you move towards your late 50s you should be considering reducing an element of investment risk from your retirement strategy.

If you are looking to achieve greater control over where your money is invested, and if appropriate to your particular situation, you may wish to consider a Self Invested Pension Plan (SIPP). A SIPP is a personal pension but with added flexibility. Before transferring to a SIPP it is important to check whether the benefits, such as your tax-free cash entitlement, are comparable with those offered by your existing pension. We can make sure you are aware of any penalties you may be charged or any bonuses or guarantees you could lose.

60 somethings
During this decade, you will be making important decisions about how your pension fund produces cash and income in retirement. These will often be lasting decisions that can have a major impact on your future finances. This is particularly true in the case of annuities, where the options are varied. You may be aware of a penalty if you are a smoker or have an illness.

Making choices at retirement is about so much more than simply choosing the most competitive annuity rate. You may wish to utilise alternative methods to achieve greater control over your income flexibility in retirement and phase the payment of tax-free cash over several years to reduce income tax bills.

DID YOU KNOW?
Forecasting your pension
It’s important to check how much pension you’ll receive on retirement, which means you can take action now if you think you won’t have enough to live on when you retire. You can do this by obtaining a forecast of what your State Pension or other pensions will pay.

Gaps in your National Insurance record
You get a State Pension if you’ve paid through National Insurance Contributions (NICs) during your working life. If there are gaps in your NICs record, your entitlement to the State Pension may be affected. You might want to consider filling in the gaps by paying extra contributions.

Pension rule changes from 2006
Since April 2006, simpler rules have been applied to both personal and company (occupational) schemes. These allow most people to pay more into their pension schemes and on more flexible terms.

Levels and bases of relief from taxation are subject to change and their value depends on the individual circumstances of the investor. The value of your investments can go down as well as up and you may get back less than you invested. The value of tax savings and eligibility to invest in an ISA or SIPP will depend on individual circumstances, and all tax rules may change in the future. The value of your SIPP when you draw benefits cannot be guaranteed as it will depend on investment growth.

Many businesses recognise the need to insure their company property, equipment and fixed assets. However, they continually overlook their most important assets—the people who drive the business; a key employee, director or shareholder.

Key person insurance is designed to compensate a business for the financial loss brought about by the death or critical illness of a key employee, such as a company director. It can provide a valuable cash injection to the business to aid a potential loss of turnover and to provide funds to replace the key person.

Share or partnership protection provides an agreement between shareholding directors or partners in a business, supported by life assurance. It is designed to ensure that the control of the business is retained by the remaining partners or directors, but the value of the deceased’s interest in the business is passed to their chosen beneficiaries in the most tax-efficient manner possible.

Passed to their chosen beneficiaries in the event of the deceased’s interest in the business is the remaining partners or directors, but the value of the deceased’s interest in the business is passed to their chosen beneficiaries in the most tax-efficient manner possible.

The above are essential areas for required and provide appropriate agreements for you to use.

The implications for your business could be very serious indeed. Not only would you lose their experience and expertise, but consider too what might happen to their shares.

The shares might pass to someone who has no knowledge or interest in your business. Or you may discover that you can’t afford to buy the shareholding; it’s even possible that the person to whom the shares are passed then becomes a majority shareholder and so is in a position to sell the company.

A written and appropriate legal agreement should be in place which would give the other director or partners the right to buy the shares and give the person to whom the shares have been passed the right to sell those shares to the remaining directors or partners.

To protect against these eventualities, each director or partner could take out a life insurance policy to cover a specified amount.

Different forms of protection

Key person insurance - compensates your business up to a pre-agreed limit for the loss or unavoidable absence of crucial personnel - including the owner-manager. It is especially appropriate if your business depends on a few employees.

Critical illness cover - pays a sum of money to specific employees or the business owner in the event of a serious illness such as a heart attack or stroke.

Income protection insurance - protects individuals by paying their salaries while they’re unable to work.

Private health insurance - funds private healthcare for specific employees. As well as being an extra benefit of employment, it could help them to return to work more quickly after an illness by paying for rehabilitation treatment.

No matter what your investment goals are and how much you wish to invest, we can work with you to develop the best portfolio for you. One solution you may wish to discuss with us are investment trusts which are backed upon fixed amounts of capital divided into shares. This makes them closed ended, unlike the open ended structure of unit trusts. They can be one of the easiest and most cost-effective ways to invest in the stock market. Once the capital has been divided into shares, you can purchase the shares. When an investment trust sells shares, it is not taxed on any capital gains it has made. By contrast, private investors are subject to capital gains tax when they sell shares in their own portfolio.

Another major difference between investment trusts and unit trusts is that investment trusts can borrow money for their investments, known as gearing up, whereas unit trusts cannot. Gearing up can work either to the advantage or disadvantage of investment trusts, depending on whether the stock market is rising or falling.

Investment trusts can also invest in unquoted or unlisted companies, which may not be trading on the stock exchange either because they don’t wish to or because they don’t meet the given criteria. This facility, combined with the ability to borrow money for investments, can however make investment trusts more volatile.

The net asset value (NAV) is the total market value of all the trust’s investments and assets minus any liabilities. The NAV per share is the net asset value of the trust divided by the number of shares in issue. The share price of an investment trust depends on the supply and demand for its shares in the stock market. This can result in the price being at a ‘discount’ or a ‘premium’ to the NAV per share.

A trust’s share price is said to be at a discount when the market price of the trust’s shares is less than the NAV per share. This means that investors are able to buy shares in the investment trust at less than the underlying stock market value of the trust’s assets.

A trust’s shares are said to be at a premium when the market price is more than the NAV per share. This means that investors are buying shares in the trust at a higher price than the underlying stock market value of the trust’s assets. The movement in discounts and premiums is a useful way to indicate the market’s perception of the potential performance of a particular trust or the market where it invests. Discounts and premiums are also one of the key differences between investment trusts and unit trusts or OEICs.

The value of investments and the income from them can go down as well as up and you may not get back your original investment. Past performance is not an indication of future performance. Tax benefits may vary as a result of statutory change and their value will depend on individual circumstances. Thresholds, percentage rates and tax legislation may change in subsequent finance acts.

Achieving a comfortable retirement.

Do you need a professional assessment of your situation to make this a reality?

If you are unsure whether your pension is performing in line with your expectations, and that you’ve made the right pension choices – don’t leave it to chance.

Contact us to discuss these and other important questions, and we’ll help guide you to a comfortable retirement.
PLANNING YOUR INVESTMENT STRATEGY

WHAT ARE YOU TRYING TO ACHIEVE WITH YOUR INVESTMENTS?

There are different types of risk involved with investing, so it’s important to find out what they are and think about how much risk you’re willing to take. It all depends on your attitude to risk (how much risk you are prepared to take) and what you are trying to achieve with your investments.

Things to think about before investing

- How much can you afford to invest?
- How long can you afford to be without the money you’ve invested (most investment products should be held for at least five years)?
- What do you want your investment to provide: capital growth (your original investment to increase), income or both?
- How much risk and what sort of risk are you prepared to take?
- Do you want to share costs and risks with other investors (using a pooled investment, for example)?
- If you decide to invest using pooled investments, consider which type would be most suitable for you. The main differences between pooled investments are the way they pay tax and the risks they involve (especially investment trusts and with-profit funds).
- What are the tax benefit implications and what tax will you pay and can you reduce it?

You may be looking for an investment to provide money for a specific purpose in the future. Alternatively, you might want an investment to provide extra income. So having decided that you are in a position to invest, the next thing to think about is: “What am I investing for?” Your answer will enable us to recommend the most suitable type of investment for you. If you have a particular goal, you will need to think about how much you can afford and how long it might take you to achieve your goal.

You may have a lump sum to invest which you would like to see grow, or from which you wish to draw an income. Equally, you may decide to invest in instalments (for example, on a monthly basis) with a view to building up a lump sum.

Your investment goals should determine your investment plan and the time question “How long have I got before I need to spend the money?” is crucial.

Generally, the longer it is before you need your money, the greater the amount of risk you are able to take in the expectation of greater reward. The value of shares goes up and down in the short term, and this can be very difficult to predict, but long term they can be expected to deliver better returns. The same is true to a lesser extent of bonds. Only cash offers certainty in the short term. Broadly speaking, you can invest in shares for the long term, fixed interest securities for the medium term and cash for the short term.

As the length of time you have shortens, you can change your total risk by adjusting the “asset mix” of your investments, for example by gradually moving from share investments into bonds and cash. It is often possible to choose an option to “lifestyle” your investments, which is where your mix of assets is risk-adjusted to reflect your age and the time you have before you want to spend your money.

Income can be in the form of interest or share dividends. If you take and spend this income, your investments will grow more slowly than if you let it build up by reinvesting it. By not taking income you will earn interest on interest and the reinvested dividends should increase the size of your investment, which may then generate further growth. This is called “compounding”.

You’ve protected your most valuable assets.

But how financially secure are your dependents?

Timely decisions on how jointly owned assets are held, the mitigation of inheritance tax, the preparation of a will and the creation of trusts, can all help ensure your dependents are financially secure.

Contact us to discuss how to safeguard your dependents, wealth and assets, don’t leave it until it’s too late.
SPREADING YOUR INVESTMENTS

RISK IS AN IMPLICIT ASPECT OF INVESTING

When deciding whether to invest, it is important that any investment vehicle matches your feelings and preferences in relation to investment risk and return. Hence your asset allocation needs to be commensurate with your attitude to risk. Another key question to ask yourself is: “How comfortable would I be facing a short-term loss in order to have the opportunity to make long-term gains?” If your answer is that you are not prepared to take any risk whatsoever, then investing in the stock market is not for you.

However, if you are going to invest, you need to be prepared to take some calculated risk in the hope of greater reward. Risk is an implicit aspect of investing: shares can fall, economic conditions can change and companies can experience varying trading fortunes.

The process of deciding what proportion of your investment portfolio should be invested in different types of investment is called ‘asset allocation’.

The four main asset classes are:
- Equities
- Bonds
- Cash
- Property

These asset classes have different characteristics for risk. When you are young, you may want to invest in assets with a higher potential for growth but greater risk, because you have the time to benefit from their long-term growth. As you get closer to retirement, you may want to choose more conservative investments that are steadier in value.

There is a wide variety of different asset classes available to invest in and commensurate risks attached to each one. While these implicit risks cannot be avoided, they can be mitigated as part of the overall investment portfolio by diversifying. By spreading your investments over a wide range of asset classes and different sectors, it is possible to avoid the risk that your portfolio becomes overly reliant on the intrinsic worth of the companies in which you own shares. Each type of investment has a degree of risk, even choosing not to invest is risky. The key is to get the right balance. Most people need a mix of assets in order to achieve their goals. The mix required depends upon individual needs.

Some asset classes are said to be ‘negatively correlated’, for instance, bonds and property often behave in a contrary way to equities by offering lower, but less volatile returns. This provides a ‘safety net’ by diversifying many of the risks associated with reliance upon one particular asset. It is also important to diversify across different ‘styles’ of investing, such as growth or value investing, as well as across different sizes of companies and different sectors and geographic regions.

Growth stocks are held as investors believe that their value is likely to grow significantly over the long term, whereas value shares are held because they are regarded as being cheaper than the intrinsic worth of the companies in which they represent a stake. By mixing styles that can out- or under-perform under different economic conditions, the overall risk rating of the investment portfolio is reduced. Picking the right combination of these depends on your risk profile, so it is essential to seek professional advice to ensure that your investment portfolio is commensurate with your attitude to investment risk.

The important thing to remember is that with investments, even if your investment goes down, you will only actually make a loss if you cash it in at that time. When you see your investment value fall, this is known as a paper loss, as it is not a real loss until you sell.

If you are going to invest, you need to be prepared to take some risk and to see at least some fall in the value of your investment. While all investments carry an element of risk, the amount of risk you take directly affects any potential returns and losses. Generally speaking, if there is less risk to your investment, your money will grow more slowly, whereas with more risk your investment may fluctuate more.

You should also be aware of currency risk. Currencies, for example sterling, euros, dollars and yen, move in relation to one another. If you are putting your money into investments in another country, then their value will move up and down in line with currency changes as well as with the normal share price movements.

Another consideration is the risk of inflation. Inflation means that you will need more money in the future to buy the same things as now. When investing, therefore, beating inflation is an important aim. Investing in cash may not beat inflation over the long term.
 Income protection insurance, formerly known as permanent health insurance, is designed to help protect you, your family and your lifestyle in the event that you cannot work and cope financially due to an illness or accidental injury preventing you from working. Without a regular income, you may find that you would struggle financially even if you were ill for only a short period and could end up using your savings to pay the bills.

In you suffer from a serious illness, medical condition, or accident; you could also find that you are never able to return to work. Few of us could cope financially if we were off work for more than 6 or 9 months.

By law, your employer must pay most employees statutory sick pay for up to 28 weeks. This will almost certainly be much less than your full earnings. Few employers pay for longer periods. If you find yourself in a situation where you are unable to work, your employer could even stop paying you altogether and terminate your employment. After that, you would probably have to rely on state benefits.

Some employers arrange group income protection insurance for their employees, which can pay out an income after the statutory sick period.

In your self-employed income protection insurance aims to put you back to the position you were in before you were unable to work. It pays a regular tax-free monthly income. It does not allow you to make a profit out of your misfortune. So the maximum amount of income you can replace through insurance is broadly the after-tax earnings you have lost less an adjustment for state benefits you can claim. This is usually translated into a maximum of 50 per cent to 65 per cent of your before-tax earnings.

When you take out cover you usually have the choice of:

**Guaranteed premiums** - the premiums remain the same all the way throughout term of your plan. If you have chosen inflation-linked cover your premiums and cover, will automatically go up each year in line with RPI.

**Reviewable premiums** - this means the premiums you pay can increase or decrease in the future. The premiums will not typically increase or decrease for the first 5 years of your plan, but they may do so at any time after that. If your premiums do go up, or down, they will not change again for the next 12 months.

How long you have to wait after making a claim will depend on the waiting period. You can choose from between 1,2,3,6,12 or 24 months. The longer the waiting period you choose the lower the premiums for your cover will be, but you’ll have to wait longer after you become unable to work before the payments from the policy are paid to you. Premiums must be paid for the entire term of the plan, including the waiting period.

Depending on your circumstances, it is possible that the payments from the plan may affect any state benefits due to you. This will depend on your individual situation and what state benefits you are claiming or intending to claim. If you are unsure whether any state benefits you are receiving will be affected, you should seek professional advice.
Making more flexible use of pension savings

Consultation process on whether the rule the age will be revised up to 77, with a annuity once they reach 75. Initially at least, to use their pension pot to purchase an annuity by age 75 will to purchase an annuity by age 75. The rule that requires all pension savers to purchase an annuity by age 75 from April 2011 to enable effective obligation to purchase an annuity will end the existing rules that create an

Existing annuity rules to end

Making more flexible use of pension savings

The rule that requires all pension savers to purchase an annuity by age 75 will be scrapped next year, the government announced on 22 June. Retired workers no longer be required to use their pension pot to purchase an annuity once they reach 75. Initially at least, the age will be revised up to 77, with a consultation process on whether the rule should be scrapped altogether.

According to the emergency Budget document released: “The government will end the existing rules that create an effective obligation to purchase an annuity by age 75 from April 2011 to enable individuals to make more flexible use of their pension savings.”

“...the government will shortly launch a consultation on the detail of this change and will introduce transitional measures for those yet to secure a retirement income who will reach 75 in the meantime”, it said.

To find out more or to discuss your requirements, please contact us.

Protecting pensioners

Link with average earnings reinstated

The Chancellor of the Exchequer George Osborne MP, on 22 June announced his intention to reinstate the link between the state pension and average earnings from next April.

The decision to increase the state pension in line with average earnings rather than inflation is expected to lead to a considerable improvement in the real value of the state pension in the coming years. The Chancellor said in the future pensioners would be protected by a “triple lock” guarantee that the state pension, currently up to £197.50 a week for a single person, would rise by the greater of either average earnings, inflation measures by the retail price index or 2.5 per cent. The link between the state pension and prices was originally broken in 1980, leading to a considerable fall in the value of the state pension in real terms. It has meant that the state pension has failed to keep pace with the cost of living in Britain.

Mr Osborne said: “There will be no more ‘flop increases to the state pension. We will provide dignity in retirement.”

Mr Osborne also announced that compulsory annuitisation would be scrapped from April next year, ending the existing rules that require pensioners to buy an annuity with their pension pot by the age of 75.

Lifestyle Protection

Has your need for protection changed?

Most people fully understand the need to protect their valuables, but when it comes to protecting their ability to provide for their loved ones after their death, this can get overlooked. In the event of your premature death, having the correct level of life assurance will ensure that your dependants are able to cope financially and their lifestyle is protected.

When you take out life assurance, you set the amount you want the policy to provide should you die – this is called the ‘sum assured’. Even if you consider that you currently have sufficient life assurance, you’ll probably need more later on if your circumstances change. If you don’t update your policy as key events happen throughout your life, you may risk being seriously under-insured.

As you reach different stages in your life, the need for protection will inevitably change. These are some of the events when you should review your life assurance requirements:

- Buy your first home with a partner
- Move other debts and dependants
- Get married or enter into a civil partnership
- Start a family
- Become a stay-at-home parent
- Have more children
- Move to a bigger property
- Salary increases
- Change your job
- Reach retirement
- Rely on someone else to support you
- Personal guarantee for business loans

Your life assurance premiums will vary according to a number of different factors, including the sum assured and the length of your policy (its ‘term’), plus individual lifestyle factors such as your age, occupation, gender, state of health and whether you smoke.

If you have a spouse, partner or children, you should have sufficient protection to pay off your mortgage and any other liabilities. After that, you may need life assurance to replace at least some of your income. How much money a family needs will vary from household to household so, ultimately, it’s up to you to decide how much money you would like to leave your family that would enable them to maintain their current standard of living.

There are two basic types of life assurance, ‘term’ and ‘whole-of-life’, but within those categories there are different variations.

Term assurance in its simplest form pays out a specified amount of the cover if you die within a selected period of years. If you survive, it pays out nothing. It is a cost-effective way of buying the cover you need. Whole-of-life assurance provides cover for as long as you live. Since the policy must eventually pay out, it may build up an investment element that you can cash in by surrendering the policy. However, it could take many years for a surrender value to build up. A variation called a ‘maximum protection policy’ enables you to buy a higher level of cover at a premium that is initially lower. Whole-of-life insurance is also available without an investment element and with guaranteed premiums from some providers.

It makes sense to cover yourself until your normal retirement age. However, if you have young children, you should cover yourself until they are financially independent, which usually comes after they have left school or university and are earning their own money.

Although the proceeds from a life assurance policy are tax-free, it could form part of your estate and become liable to Inheritance Tax (IHT). The simple way to avoid IHT on the proceeds is to place your policy into an appropriate trust, which enables any payout to be made directly to your dependants. Certain kinds of trusts allow you to control what happens to your payout after death and this could speed up a payment. However, they cannot be used for life assurance policies that are assigned to (earmarked for) your mortgage lender.

If you would like to review your current protection requirements, please call us for further information.
GREEN INVESTORS

A PRINCIPLED APPROACH

Green investors have been rewarded for their principled approach after it was revealed that the performance of the ethical funds sector had improved over the past year.

The latest survey from Moneyfacts showed that ethical investment funds had enjoyed strong returns over the last 12 months. The Ethical Investment Research Service (EIRIS) also recently revealed that investments into green and ethical funds in the UK had hit a record high.

EIRIS defines an ethical fund as ‘any fund which decides that shares are acceptable, or not, according to positive or negative ethical criteria (including environmental criteria)’.

Since ethical investment, by definition, reduces the number of shares, securities or funds in which you can invest, it tends to increase the volatility of the portfolio and therefore the risk profile. This can be mitigated by diversifying between funds, and between different styles of funds and fund managers. Like their non-ethical equivalents, some ethical funds are much higher risk than others.

TO FIND OUT MORE OR TO DISCUSS YOUR ETHICAL OPTIONS, PLEASE CONTACT US.

The value of investments and the income they generate will fluctuate, and you may get back less than you invested.

People aged 55 to 75 have the option of continuing to contribute to their pension fund, to leave it untouched, or to draw an income through a process known as ‘unsegregated pensions’. If you are approaching your mid-70s it is crucial that you do not leave it too late to shop around for the best annuity deal, referred to as “exercising the open market option”. Currently this means you would have to accept the annuity rate offered by your own pension company, rather than obtaining the highest market rate. If you are approaching your 75th birthday and have decided to go to the wire before taking your annuity, it is crucial to contact us sooner rather than later to provide us with ample notice so that we can make a smooth transition for transferring the funds. Some providers are much more efficient than others, but we would urge anyone who has deferred buying an annuity to be certain to start investigating all necessary arrangements at least six months before their 75th birthday. Otherwise you could face losing your tax-free lump sum, which is non-negotiable with HM Revenue & Customs once you go past your 75th birthday.

Once you reach your seventies, your health is likely to be less good, and you could be entitled to buy an “impaired life” annuity which will provide a much better income.

The Chancellor of the Exchequer, George Osborne MP, on 22 June announced the rule that requires all pension savers to purchase an annuity by age 75 will cease next April. Retired workers will no longer be required to use their pension pot to purchase an annuity once they reach 75. Initially at least, the age will be revised up to 77, with a consultation process on whether the rule should be scrapped altogether.

DON’T LEAVE IT TOO LATE TO SHOP AROUND FOR THE BEST ANNUITY DEAL

In times of turbulent markets and changing tax legislation, you want to be certain your future is adequately planned for. That is why, rather than offering clients an off-the-shelf financial planning solution, we take the time to find out about you, your current financial situation and your short-, medium- and long-term goals. Only then will we make firm recommendations about how you should plan for your future.

Your financial plan should consider your entire financial circumstances, including investments, pensions and protection requirements together with your income and tax position. Having discussed with you your objectives and attitude towards risk, we are able to make recommendations about how to structure your affairs in the most efficient manner.

LAYING THE FOUNDATIONS OF YOUR PERSONAL FINANCIAL PLAN IS ONLY THE START OF OUR COMMITMENT TO YOU. TO FIND OUT MORE ABOUT HOW WE CAN HELP YOU ACHIEVE YOUR FINANCIAL GOALS, PLEASE CONTACT US FOR MORE INFORMATION.
IN SEARCH OF INCOME
ALTERNATIVE HOMES FOR YOUR NEST EGGS

The Bank of England’s decision to keep interest rates low means that many savers will now receive virtually no return from their money. As a result, many will be looking for alternative homes for their nest eggs. If you are considering building a portfolio of income-producing funds, your first priority should be to decide the level of risk you’re happy with and the investment term. Let’s consider some of the options available.

Government gifts
Gifts are government bonds. Governments borrow from you, pay a fixed interest rate and then pay you back on a fixed date. Gifts involve more risk than cash because there’s a chance the government won’t be able to pay you back. It’s highly unusual for a government to default on a debt, so they have been considered very safe - however, in the current economic climate, this risk increases.

Not all gifts are bought from the government and held to maturity; some are bought and sold along the way, so there’s a chance for their value, and the value of gift funds, to rise and fall.

Corporate bonds
Corporate bonds are the same as corporate bonds funds, to rise and fall. Government and held to maturity; some are economic climate, this risk increases.

To default on a debt, so they have been induce people to buy their debt.

Also, an increasing number of global bond funds are entering the market, which may enable investors to acquire value from a lot of different markets.

Equity income funds
Equity income funds invest in shares, focusing on the big blue-chip firms that have a track record of good dividend payments. The dividends are your income.

You are investing in shares. Funds tend to focus on those firms they believe have cash in the bank to keep paying dividends, but there are no guarantees. In return for taking these risks, there is potential for both income and growth. Typically, funds aim to provide a stable income that grows over time, meaning income has the potential to rise in the future too, which is key to the philosophy of investing in equity income.

Global equity income funds
Global equity income funds are similar to UK funds, except that there are only a handful of big blue-chips that pay reliable dividends in the UK, whereas global diversification offers a larger range of companies to choose from.

If you consider that you have too much of your investment concentrated in sterling-based assets, a global fund could provide a useful diversification. However, investing in other currencies brings an added level of risk, unless the fund hedges the currency.

Equity income investment trusts
Equity income investment trusts are very similar to other equity income investments, but they are structured differently from the unit trusts and open-ended investment companies. Unit trusts are open-ended, which means there’s no cap on how much money the fund can take, so the price depends purely on the value of the assets it holds.

Investment trusts, on the other hand, are closed-ended. They are structured as companies with a limited number of shares. The price of the fund moves up and down depending on the level of demand, so the price of the trust depends only on the value of the underlying investments but also on the popularity of the trust itself. In difficult times, when investors are selling up, trusts are likely to see their share price fall more than the value of their underlying investments. This also means that they have more potential for greater returns once better times resume.

Distribution funds
Outside the basic asset types, there are a number of products designed to produce an income. These include distribution funds, which sit somewhere between bonds and equities on a risk-for-return scale. They are managed funds, investing in a combination of bonds, equities and commercial property in order to produce an income. Typically, investment is split between dividend-producing equities and corporate bonds.

The value of investments and the income from them can go down as well as up and you may not get back your original investment. Past performance is not an indication of future performance. Tax benefits may vary as a result of statutory change and their value will depend on individual circumstances. Thresholds, percentage rates and tax legislation may change in subsequent finance acts.
Emergency Budget -
taxation and allowances

What do the numbers mean to you?

The following information is based on proposals set out by the Chancellor in his emergency Budget of 22 June 2010 but is subject to amendment in the Finance Bill. Items marked “TBA” are to be announced at a later date.

### Income Tax

<table>
<thead>
<tr>

<td>Additional</td>
<td>50%</td>
<td>Above £150,000</td>
</tr>
</tbody>
</table>

Non-savings income is taxed as the first slice of income, followed by savings income and then dividends.

Dividends falling into the basic rate band are taxed at 10%. The higher rate of tax for dividends is 42.5%. This is reduced by the dividend tax credit.

Savings income falling into the first £2,440 of taxable income will be taxed at 10%.

### National Insurance Contributions

Any unused nil-rate band may be transferred to the deceased’s spouse or civil partner. On death, any gifts made within the previous seven years will become taxable, but the tax payable will be reduced by tapering relief if the donor has survived at least three years.

Where tax is payable on a lifetime gift (other than those taxable only because they are made within seven years of death), tax is charged at 20%.

Various reliefs and exemptions are available.

### Car and Fuel Benefits

#### Cars

The taxable benefit in respect of a petrol car provided by an employer is calculated by reference to the car’s carbon dioxide emission rating, with the scale charge normally varying between 10% and 35% of the list price. There is a supplementary charge of 3% for diesel cars but not so as to take the total percentage beyond the maximum of 35% mentioned above. The rate for zero-emission vehicles is 0%.

#### Car fuel

The taxable benefit in respect of fuel provided by an employer is the ‘appropriate percentage’ of £18,000 where the appropriate percentage is the figure (from 10% to 35%) used to determine the taxable benefit in respect of the provision of the car.

* Reducing balance General writing down allowance rate and special rate pool rate to be reduced from April 2012 to 18% and 8% respectively.
** Subject to conditions. To be reduced to £25,000 from April 2012.
*** Allowances being phased out over the period to March 2011.
EMERGENCY BUDGET 2010 AT A GLANCE

WERE YOU A WINNER OR A LOSER?

Take a look at our guide and see how your finances may have been affected by the emergency Budget.

Emergency Budget 2010 highlights

Economy
- Growth is forecast to be 1.2 per cent this year, taking into account the emergency Budget measures. It is forecast to be 2.3 per cent next year, 2.8 per cent in 2012, 2.9 per cent in 2013 and 2.7 per cent in both 2014 and 2015.
- Debt will be falling and structural current deficit should be balanced by 2014.
- Consumer price inflation is expected to reach 2.7 per cent by the end of the year, returning to target in the medium term.
- Unemployment rate forecast to peak at 8.1 per cent this year and then fall for each of the next four years to reach 6.1 per cent in 2015.
- 77 per cent of total consolidation to be achieved through spending reductions and 23 per cent through tax increases.
- Public sector net borrowing will be £149bn this year, £116bn next year, £89bn in 2102/13, £60bn in 2013/14, £37bn in 2014/15, falling to £20bn in 2015/16.
- Public sector net debt as share of GDP will be 62 per cent this year and will peak at 66 per cent in 2013/14. It will then begin to fall, reaching 67 per cent in 2015/16.
- Additional current expenditure reductions of £30bn a year by 2014/15.
- No further reductions in capital spending totals.

Public sector
- Two-year public sector pay freeze on staff earning more than £21,000.
- People earning less than £21,000 will each receive a flat pay rise worth £250 in each of the two years.
- Operational allowance for troops in Afghanistan doubled to £4,800.
- Will Hutton to draw up plans for fairer pay across the public sector, without increasing the overall pay bill, so that those at the top of organisations are paid no more than 20 times the salaries of those at the bottom.
- An independent commission chaired by John Hutton will review public sector pensions. There will also be consultation on introducing a default retirement age.
- Rise in the state pension age to 66 will be accelerated.
- Government will seek private capital injection into the Royal Mail Group.

Welfare
- Benefits, tax credits and public service pensions will increase in line with consumer prices rather than the Retail Price Index.
- Child benefit to be frozen for the next three years.
- Caps on housing benefit to be introduced from £280 a week for a one-bedroom property to £400 a week for a four-bedroom or larger. Together with other measures, this will reduce costs of housing benefit by £1.8bn a year by the end of the parliament.
- Sure Start Maternity Grant will go to the first child only.
- Eligibility for child tax credits to be reduced for families with a household income of more than £40,000 from April next year.
- The baby element of child tax credit will be abolished from April next year.
- Child element of the child tax credit to increase by £150 above indexation next year.

Taxes
- VAT to increase to 20 per cent on 4 January next year.
- Government to work with local authorities to freeze council tax for one year from April next year.
- Capital gains tax, increased for higher earners from 18 per cent to 28 per cent from midnight on 23 June. Low- and middle-income savers will continue to pay 18 per cent.
- Personal income tax allowance to be raised by £1,000 from April to £7,475.
